Existing Ride Custom Cushion Supplier Ride Custom Back Upgrade Instructions. U.S. Customers

What you need to know

Thank you for your interest in upgrading your Ride Designs' Custom Systems provider status to include the new Ride Custom Back.

To upgrade you must:

- Purchase evaluation and simulation tools.
- Attend a Ride Certification Training program.

You will need to choose between using our simulation process, or, if you already have a molding simulator, use what you already own.

As a previously certified provider, you have options for training to upgrade your status to include Ride Custom Back provision:

- If you were certified prior to the 2007/8 two day certification course we strongly recommend attending both days of the new course. Much has evolved regarding simulation and fitting of Ride Custom Cushions.
- If you attended the two day course, then attendance for day two of the current program is all that is necessary to achieve your upgrade. Again, we strongly encourage participation for both days to fully update your skills and knowledge.

The following instructions and package will guide you through the process.

Instructions:

Please print this package and follow these simple instructions.

1. Starter Kit Order Form.

Important Note:

If you were certified prior to the 2007/8 2 day certification programs, and/or you do not have Ride Evaluator cushions, then you will need the Ride Custom Cushion Update Kit (see Starter Kit order form for details).

- a. You are required to have all tools necessary for evaluation and simulation.
- b. We require a PO for the tools prior to your attendance at the course, but you may opt to specify your tool preferences once you complete the course.
- c. You must use the Ride Custom Cushion simulators and Evaluators for specifying Ride Custom Cushions.
- d. You may, however, choose to use a seating simulator you already own for capturing back shapes, or you may prefer our simulation method and system.
- e. Please note that Ride Designs pays for shipping of all Ride Custom products and initial tools purchased. Additionally, every Ride Custom Component ordered comes with everything needed to simulate and order your next product shipped back to you at no additional charge.
- f. You will not need to purchase any additional materials once you have made this initial investment, with the occasional exception of low cost supplies that help you re-do shape captures in the field when necessary. Your initial kit includes ample tools to initially cover these needs.

Please feel free to call us at the toll free number (866.781.1633) if you require any assistance in completing the application and associated forms. We look forward to seeing you at the Certification Course and caring for you and your client's needs well into the future.
