

## Going, going... and for good reason

Ride recently introduced an ultra-breathable 3D mesh liner option for the Ride Custom Back -- and it has quickly become evident that this new liner is superior in every way to our original composite (Brock®) foam liner. It keeps the sitter even cooler and drier, is easier to clean, and in-field modifications are much more efficient.

In alignment with our mission to use only the very best materials to make Ride cushions and back supports, we will discontinue offering Brock composite foam on the Ride Custom Back as of May 31, 2021.

### Ride Custom Back liner options

Orders for the Ride Custom Back with the Brock composite liner received by the end of business on May 31, 2021 will be fulfilled. Quotes for the Ride Custom Back with Brock foam liner that are open as of June 1, 2021 will be modified: the Brock foam option will be replaced with the ultra-breathable 3D mesh liner option.

More detailed information -- plus answers to most-asked questions on the discontinuation are [here](#).

## New clinical research

The [Forward](#) and [Java Cushions](#) were the subject of recent clinical trials, to evaluate their efficacy, in support of Ride's entry into the German market.

View research summaries here for the [Forward Cushion](#), the [Java Cushion](#), or download the [complete clinical test results](#).

## Custom Certification courses in Colorado

Registration is open for courses scheduled June 10-11 and July 22-23 [here](#). Attendance at courses is very limited to allow for social distancing. We do have a waitlist for courses that may be full. All possible safety precautions (per CDC and Colorado Health Department recommendations) are being taken.

### NEW: AccuSoft Cushion lateral reinforcement option

The Ride Custom AccuSoft Cushion is a great option for those needing a softer, more supple sitting surface.

If additional rigidity is needed to support the lateral thighs, a new reinforcement option boosts structural integrity, while using forgiving materials that help reduce the risk of injury to skin and soft tissue.
