

Aspen Seating Orthosis (ASO)

The most accurate and effective adapted seating system for people with disabilities.

Secondary Supports

Easy integration of secondary supports such as pelvic belts, shoulder harnesses and head supports.

Thermal Regulation

Brock® composite material with specifically engineered spacer mesh for maximum breathability and unparalleled skin protection.

Highly Accurate Support

Our patented shape capture process along with our free-standing and lightweight shell offers superior postural control across a broad range of mobility and positioning platforms.

Aspen Seating

Aspen Seating is the parent company of Ride Designs®, the leading innovator of custom and configured seating systems across North America and internationally.

Housed within the same building as the Aspen Seating Clinic, Ride Designs takes the lessons learned through caring directly—for the most discerning customers with the most unique and challenging seating issues—and channels that experience into research and development of state-of-the-art seating solutions.

Seated for Success

Don't just take any seat.... Take the ultimate seat.

For nearly 20 years, we've been driven by one purpose: To create the most innovative wheelchair seating systems, period. It's a purpose that has netted us not only patents and proprietary materials, but also new ways of thinking. It's a purpose that's experienced by world-class Paralympians and regular every day citizens. It's a purpose that we constantly push to make better, more exact, more comfortable and more innovative. It's why we tackle the most demanding seating challenges head on and create seating solutions that work!

Supporting more than posture.

How do you provide effective postural support while combating the risk of skin breakdown in the process? These are the types of questions we ask ourselves when designing our seating systems. The answer comes in the form of our patented cushion molding, which strikes a perfect balance between off-loading high-risk bony prominences and safe loading of low risk anatomy. The result provides superior postural control and off-loading of bony prominences, reducing the risk of skin breakdown. Your all-in-one solution: The Aspen Seating Orthosis (ASO).

Every day, we work with people looking for solutions, when nothing else has met their individual seating needs.

Discover how the Aspen Seating Clinic solves the most complex seating problems.

- Client-focused approach
- Restoration of healthy sitting for the aging client
- Nurture growing and developing children
- Sports and recreation seating solutions.
- Alternative position systems
- Portable, free standing, lightweight, adjustable and breathable seating orthoses
- Up to three years outcomes based warranties
- Skilled Clinicians
- Free evaluations and provision of all documentation for funding

A seat that wicks away sweat, moisture and compromise.

From winter to summer, the importance of maintaining dry air space around the body is essential for not just comfort and sitting endurance, but also skin health. In fact, the National Pressure Ulcer Advisory Panel recognizes chronic moisture as a risk factor for skin breakdown. It's why we use our patented Brock® foam composite material in the ASO. Brock foam is breathable, moisture resistant, and fully washable. We then cover the Brock foam with a specially engineered spacer fabric that helps wick moisture into the air space for enhanced evaporation and air exchange. It's a difference you and your skin will notice immediately.

As a child grows, the ASO grows.

While a custom seating solution is ideal for adults, it's not always the best fit for a growing child. Until now. Unlike other systems, which provide temporary removable liners to accommodate growth over time, the ASO offers a unique program that covers height, width and weight adjustments for three years. So as a child grows, his/her seating system grows. No liners, no add-ons, no temporary fixes, no compromises. It's a program that's exclusive to Aspen Seating and ensures that an ASO for a growing child is just as comfortable and as accurate a fit as an ASO for adults. Just another way we're committed to creating the best possible seating experience for everyone.
